

DIENST OPENBARE SCHOLEN • CURAÇAO

The DOS Platform User Manual & Guide

A complete, step-by-step manual for the DOS workforce attendance platform — explaining how a single teacher check-in becomes verified attendance, a live director dashboard, and payroll-ready data across every public school in Curaçao.

VERSION 1.0 • 2026 • WORKFORCE MANAGEMENT PLATFORM

An official platform of the Ministerie van Onderwijs, Wetenschap, Cultuur & Sport

About This Manual.

The DOS platform replaces paper sign-in sheets and manual hour-tracking with a secure, mobile-first attendance system. Teachers check in with a single tap of their phone on an RFID reader; directors see attendance live; and verified hours flow straight into payroll — automatically.

This manual walks through the platform one step at a time. Each section explains **what it is**, **how it works in practice**, and **why it matters** — so school staff, directors, and decision-makers can understand the full journey from a single check-in to island-wide oversight.

HOW TO USE THIS MANUAL

Read it in order for the complete picture, or jump to any numbered step using the contents below. Each step stands on its own and ends with the practical outcome you can expect.

CONTENTS

01	The Challenge — why attendance needs to change	p. 03
02	The Ecosystem — one connected network	p. 04
03	How It Works — the check-in, step by step	p. 05
04	Late Arrival Detection	p. 06
05	Multiple Campus Support	p. 07
06	Command Center — the director dashboard	p. 08
07	Payroll Preparation	p. 09
08	Strategic Vision — what it grows into	p. 10
09	System Architecture — how data flows	p. 11
10	Product Experience	p. 12
11	Implementation Journey	p. 13
12	The Vision	p. 14

A Better Way to Track Attendance.

The way most schools record attendance today is slow, manual, and error-prone. Understanding the problem makes it clear why DOS is built the way it is.

Today, attendance often depends on paper sign-in sheets. Hours are added up by hand, payroll is prepared from those numbers days later, and directors have no live view of who is actually present. Every step introduces delay and the chance of error — and it consumes hours of administrative time that could go to running the school.

THE PROBLEM TODAY

- Paper sign-in sheets, prone to errors
- Hours calculated by hand
- Payroll delays and inaccuracies
- No real-time oversight for directors
- Heavy administrative burden

THE DOS WAY

- Tap-to-check-in from any phone
- Automatic, accurate hour tracking
- Payroll-ready exports, instantly
- Real-time director dashboards
- RFID-verified & completely paperless

WHY IT MATTERS

Accurate attendance is the foundation for fair payroll, reliable reporting, and good decisions. Fix the foundation, and everything built on top of it becomes trustworthy.

One Connected Educational Network.

DOS is not a stand-alone app on one phone — it is a single network that connects every teacher, school, director, and payroll office around one shared source of truth.

Because everyone works from the same live data, there is never a question of whose record is correct. A check-in made by a teacher is the exact same event the director sees on the dashboard and the same event payroll receives. Nothing is re-typed, re-counted, or re-interpreted along the way.

THE SINGLE CHAIN OF TRUTH

01 One teacher checks in

The journey always starts with a real, verified person tapping in at a school.

02 One school confirms it

The check-in is registered to that specific campus, with its time and location.

03 One director sees it live

The school's leadership sees the update on their dashboard the instant it happens.

04 One platform updates

The central platform records it once, as the authoritative version of events.

05 One payroll receives accurate data

Verified hours are ready for payroll with no separate data entry.

The Check-In, Step by Step.

For the teacher, checking in takes about eight seconds. Behind that single tap, the platform completes a full, secure workflow. Here is exactly what happens.

01 Teacher arrives at school

The day begins as normal — no badge to remember, no sign-in sheet, no queue at the office.

02 Teacher opens the DOS mobile app

On their own phone, the app is already linked to their verified identity.

03 Taps the phone on the RFID reader

A single tap on the wall-mounted reader registers the check-in over secure NFC.

04 Identity is verified securely

The platform confirms who is checking in and where, so attendance cannot be faked.

05 Attendance is recorded instantly

The check-in is timestamped and stored the moment it happens.

06 Director dashboards update automatically

Leadership sees the live update with no action required on their part.

07 Payroll-ready records are generated

Verified hours accumulate into export-ready payroll data.

PAPER FORMS

Late Arrival Detection.

Lateness is handled the same way as any check-in — automatically. No one has to notice it, write it down, or chase it up.

When a teacher checks in after their expected start time, the platform recognises it immediately, works out exactly how late they are, and updates everyone who needs to know — all before the teacher has reached the classroom.

01 RFID Verified

The teacher's identity is confirmed at the reader, exactly as in a normal check-in.

02 Late Arrival Detected

The platform compares the check-in to the expected time and calculates the delay live.

03 Director Notified

A push notification is sent to administration the moment lateness is detected.

04 Attendance Synced

The dashboard reflects the late arrival in real time.

05 Payroll Updated

Hours are auto-adjusted, so payroll stays accurate with zero rework.

WHY IT MATTERS

Patterns become visible without anyone policing the door. Administration spends its time on decisions, not on detective work.

One Teacher. Many Schools.

Many teachers work across more than one school. The platform handles this automatically, so a multi-campus teacher never has to think about it.

When a teacher checks in, DOS detects which campus they are at, keeps that school's record separate, and still rolls everything up into one combined report. There is no manual switching between schools and no risk of hours landing in the wrong place.

- **Automatic Campus Detection**

The system knows which school the teacher is at, instantly, from the check-in itself.

- **Separate Attendance Logs**

Each campus keeps its own clean, distinct record of who was present and when.

- **Unified DOS Reporting**

All campuses combine into a single report for the teacher and for leadership.

- **Real-Time Synchronization**

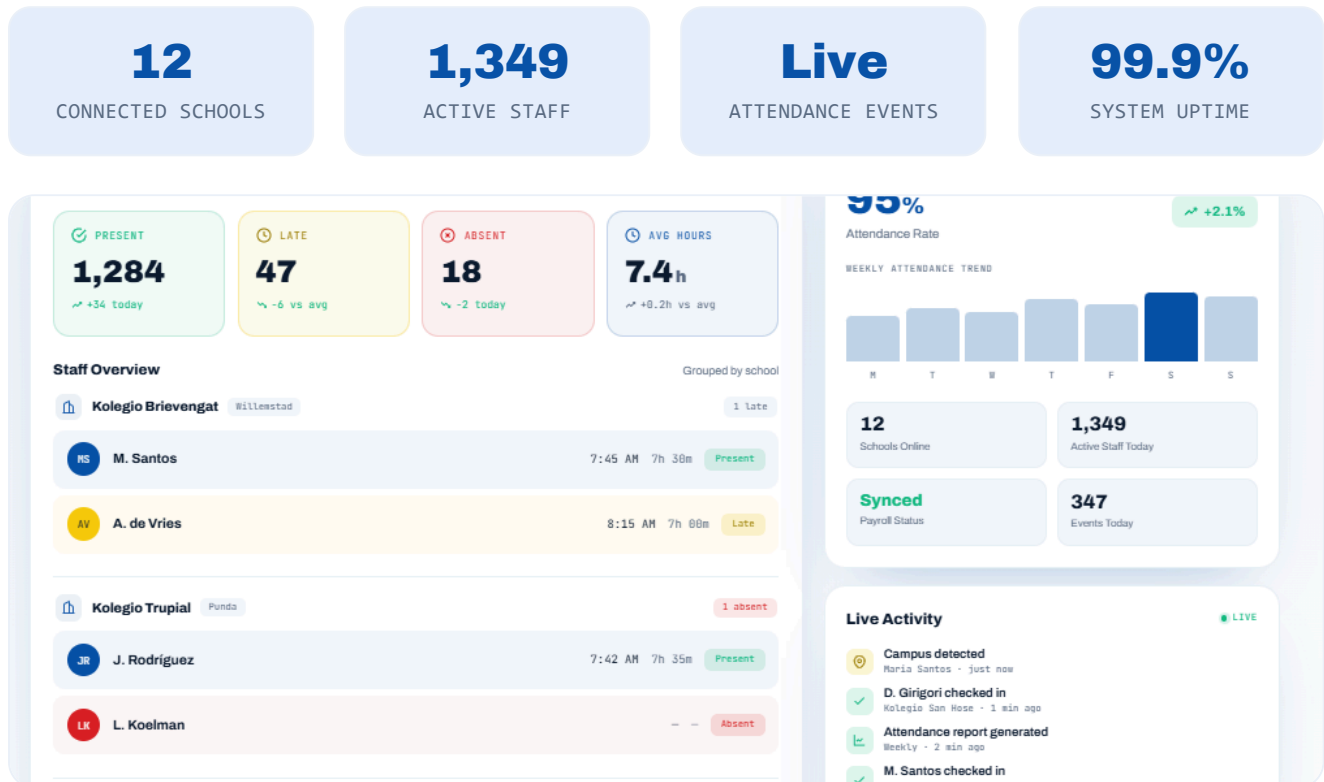

Every campus updates the moment a check-in happens — nothing waits for end of day.

Your Entire Network. One View.

The director dashboard is where all of this becomes visible. It is the live command center for a single school or the entire DOS network.

At a glance, leadership can see who is present, who is late, who is absent, and how many hours have been worked — across every connected school. Because the data is live, the dashboard always reflects reality right now, not a report from last week.

Staff are grouped by school with present, late, and absent status; weekly trends and payroll-sync status sit alongside, so a director can move from the big picture to a single teacher in seconds.

Attendance In. Payroll Out.

Every check-in the platform records automatically becomes a verified, payroll-ready record — no spreadsheets, no manual calculation, no chasing hours.

Because hours are already captured and verified, preparing payroll is no longer a data-entry task. The platform does the calculation continuously, and produces a SOHO-ready export with a single click.

01 Teacher checks in

The start time is captured automatically at the reader.

02 Synced to the DOS cloud platform

The record is stored centrally as it happens.

03 Hours calculated instantly

Worked time is computed continuously, not at the end of the period.

04 One-click SOHO export

A payroll-ready Excel / CSV file is generated on demand.

05 Payroll-ready — zero manual work

Nothing to re-type, nothing to chase, nothing to reconcile.

Step	Manual process, today	With DOS
Time per pay period	8–12 hours	5 minutes
Verification	By hand, error-prone	Automatic & verified
Entry into payroll	Re-typed record by record	One-click export

School Ecosystem Expansion.

Attendance is where DOS starts — not where it ends. The same verified data becomes the foundation for managing the whole school workforce.

Once attendance is accurate and live, the platform can extend naturally into the systems that depend on it. Each new module reuses the same trusted data, so the school never rebuilds its records from scratch.

TODAY — LIVE IN SCHOOLS

Teacher check-in, RFID verification, attendance tracking, and the director dashboard are in use now.

TOMORROW — WHAT THE PLATFORM GROWS INTO

Payroll Integration

Verified hours flow straight into SOHO; payroll runs itself.

HR Management

Staff records, schedules and leave — the whole team in one place.

School Analytics

Turn attendance data into trends, patterns and clear decisions.

Multi-School Management

Every school and campus, managed from one platform.

Leadership Reporting

One clear, real-time picture for school and network leadership.

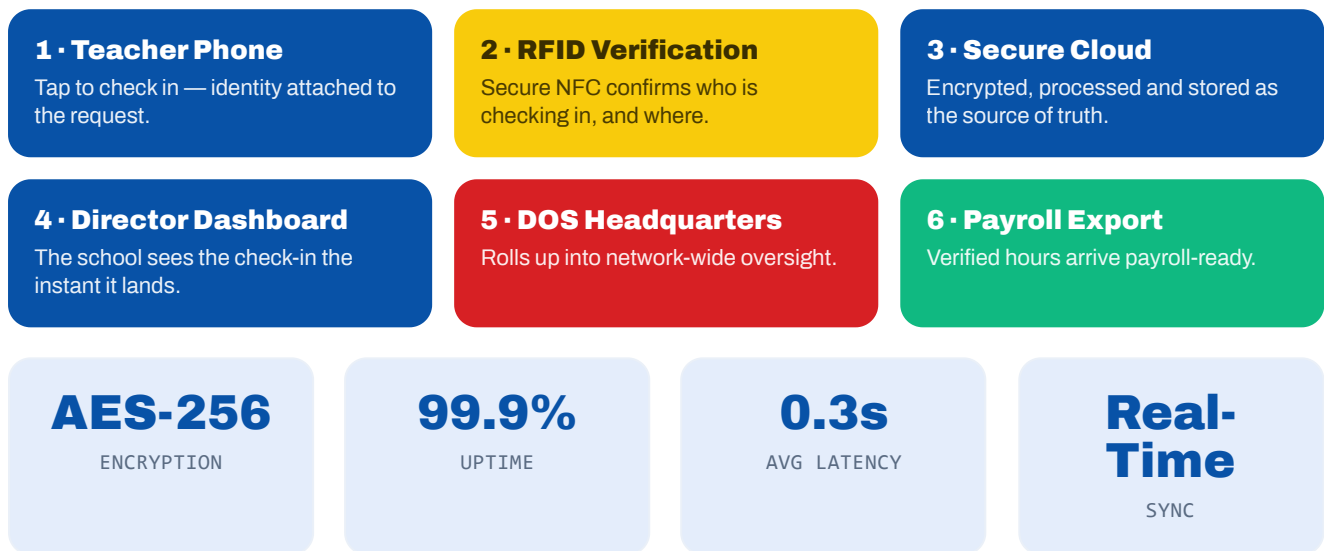

Operational Oversight

See schools, staff and attendance live, as it happens.

How the Data Flows.

For technical readers and decision-makers: this is the secure path every check-in travels, from a teacher's phone to payroll, in real time.

Each layer has one job and hands off to the next. Together they guarantee that attendance data is verified, encrypted, and impossible to tamper with on its way through the system.

IN ONE LINE

Encrypted end-to-end, synced in real time — from a single tap to national oversight.

The DOS Platform In Action.

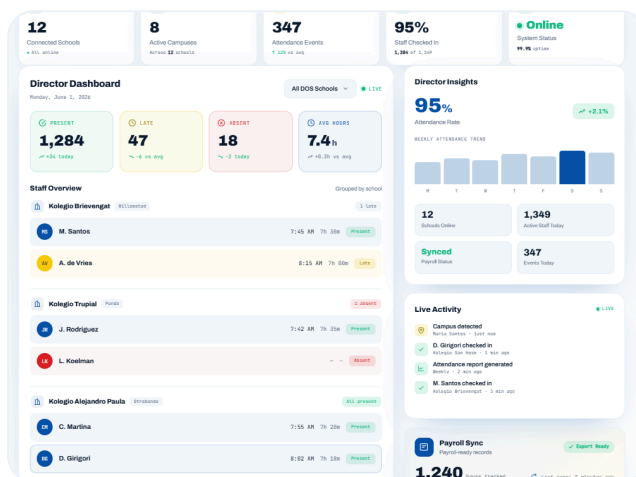

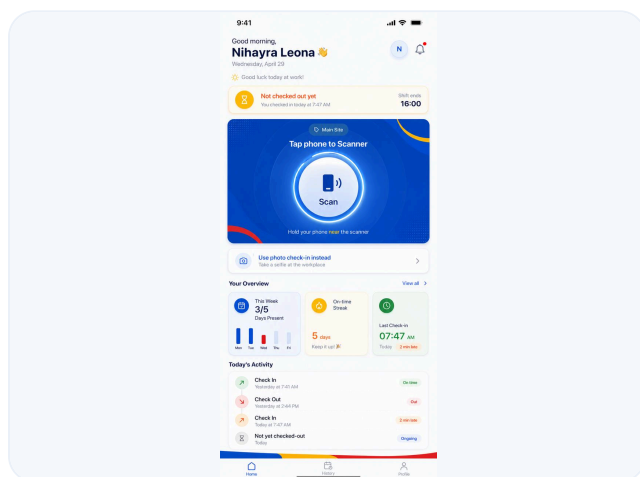

The platform is built for two kinds of people: the teacher who checks in, and the administrator who oversees it. Each gets an experience designed for their role.

TEACHER — MOBILE CHECK-IN

- Arrives at school
- Taps phone on the RFID reader
- Attendance confirmed instantly
- Hours automatically tracked

ADMINISTRATOR — LIVE DASHBOARD

- Sees each teacher check in
- Dashboard updates instantly
- Late arrivals detected
- Reports generated automatically

The teacher's app is clean and fast — a check-in takes seconds. The administrator's dashboard turns those check-ins into a live, readable picture of the whole school.

Rolling Out Across Curaçao.

DOS is designed to grow in deliberate stages — proving value in a few pilot schools before scaling to every public school on the island.

Phase 1 · Pilot & Foundations — 4 schools

First pilot schools selected, RFID readers installed, staff trained.

Phase 2 · Adoption & Impact — 10 schools

Teachers adopt tap check-in; accuracy improves immediately.

Phase 3 · Insight & Payroll — 18 schools

Real-time visibility for directors; automated payroll integration.

Phase 4 · Island-Wide — 25+ schools

Scaled to every DOS school; one unified platform.

THE TRANSFORMATION, IN EVERY SCHOOL

Measure	Before DOS	With DOS
Attendance accuracy	Paper & guesswork	100% verified
Payroll preparation	8–12 hours	Minutes
Data visibility	Delayed / none	Real-time
Admin workload	Heavy & manual	Automated

This Is Bigger Than Attendance.

DOS is building the digital infrastructure for the future of education across Curaçao — and it starts with a single check-in.

Every School Connected.

Every Teacher Accounted For.

Every Decision Informed.

Powered By DOS.
